

Seek Higher Returns With Lower Risk

Mid Cap Value seeks to deliver higher returns with lower volatility over time through investments in high-quality, mid-sized companies temporarily selling at a discount.

Focuses on Fundamentals

The team seeks to derive returns from the team's stock-picking abilities. The investment professionals strive to:

- Employ fundamental, bottom-up research to determine each company's risk/reward profile
- Identify companies that exhibit high-quality attributes that are selling at a discount to fair value
- Select stocks with characteristics they believe may increase returns, lower volatility, limit losses, and provide income over time

Balances Risk and Return

The strength of the fund's process lies in the belief that the balance between participating in the market's upside and mitigating its downside is key to producing long-term outperformance. The team seeks to:

- Produce lower-than-average volatility than peers
- Deliver competitive returns in rising markets
- Limit losses in market downturns

Serves as a Portfolio Diversifier

Mid Cap Value is a versatile portfolio that focuses on mid-cap stocks, which historically has been an opportunity-rich space. The portfolio may help improve risk-adjusted return potential in a variety of ways:

- Complement for aggressive growth holdings
- Diversifier for portfolios heavily weighted in large-cap stocks
- Vehicle for building capital over the long term while taking less risk

Mid Cap Value has delivered higher returns with less risk than many of its peers

You should consider the fund’s investment objectives, risks, and charges and expenses carefully before you invest. The fund’s prospectus or summary prospectus, which can be obtained at americancentury.com, contains this and other information about the fund, and should be read carefully before investing.

Mutual fund investing involves market risk. Investment return and fund share value will fluctuate, and it is possible to lose money by investing. The information is not intended as a personalized recommendation or fiduciary advice and should not be relied upon for investment, accounting, legal or tax advice.

Equity investments are subject to market fluctuations. Different investment styles tend to shift in and out of favor depending on market and economic conditions, as well as investor sentiment. The fund may invest in foreign securities. Investing in foreign securities involves special risk considerations, including economic and political conditions, inflation rates and currency fluctuations.

Historically, small- and/or mid-cap stocks have been more volatile than the stocks of larger, more established companies. Smaller companies may have limited resources, product lines and markets, and their securities may trade less frequently and in more limited volumes than those of larger companies.

The Average of Morningstar Mid-Cap Value Category is an average of all the funds in this category. It is not an investment product available for purchase. ©2025 Morningstar, Inc. All Rights Reserved. Standard Deviation measures how widely performance has varied from average. In financial literature, it's often used to measure risk, when risk is measured or defined in terms of volatility.

Total return is a fund's gain over a specified period of time. Total return is any income the fund paid out, plus or minus any increase or decrease in the value of the portfolio's holdings, assuming reinvestment of income and capital gains.
