

An Active Mindset for Fixed Income ETFs

Whether you're looking for income, diversification, downside risk mitigation or tax-managed solutions, our fixed income portfolios seek to benefit from strong markets while pursuing reduced drawdowns in declining markets.

Focused on Consistent Results

We pursue excess returns over full market cycles by emphasizing risk management while seeking to capitalize on high-conviction opportunities.

Rooted in Active Management

We build portfolios bond-by-bond through in-depth proprietary research, seeking to avoid risks inherent in indexed strategies. Relative to indexed strategies where exposures are dictated by bond issuance, our portfolio managers can pursue opportunities based on their assessment of the relative attractiveness of individual bonds, fixed-income sectors, and desired exposure to various points on the yield curve. We believe our scalable size allows our team to identify and invest in attractive issues that can have a material impact on portfolio performance.

Pioneering Growth With American Century ETFs

As the 4th largest issuer of active ETFs* with one of the fastest organic growth rates among ETF providers, our solutions can provide the key building blocks needed to customize low cost, tax-efficient, value-added portfolios.

We've been driven to succeed on behalf of our clients. We are continually enhancing our offerings across diversified investment capabilities and vehicles best suited to meet clients' needs. Participating in the ETF market since 2018, our ETFs have almost \$37 billion in assets under management, placing us among the top 20 ETF issuers in the industry (currently 16th).*

INNOVATIVE

Variety of investment approaches that offer proactive solutions.

UPSIDE POTENTIAL

Alpha-seeking portfolios based on manager research and insights.

LOWER COST

Opportunity to add value in a lower-cost, tax-efficient vehicle.

Contributing to Humanity

An enduring impact for all. Twenty years ago, our founder had an audacious idea. Use profits from his investment firm to end diseases that touch everyone. Like cancer. And Alzheimer's.

That's why over 40% of our profits go to the Stowers Institute for Medical Research, a world-class biomedical research organization dedicated to defeating life-threatening diseases.

Since its founding in 2000, American Century Investments' dividend payments of over \$2 billion* to the institute enable the work we do together with our clients to contribute to humanity.

You should consider the fund's investment objectives, risks, charges and expenses carefully before you invest. The fund's prospectus or summary prospectus, which can be obtained by visiting Avantisinvestors.com or by calling 833-928-2684; for American Century products visit americancentury.com. This document contains this and other information about the fund and should be read carefully before investing.

Exchange Traded Funds (ETFs) are bought and sold through exchange trading at market price (not NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns.

AHYB, FUSI, KORP, TAXF, AEMB, MUSI and SDSI: These funds are actively managed ETFs that do not seek to replicate the performance of a specified index.

AHYB, FUSI, KORP, TAXF, AEMB, MUSI and SDSI: Generally, as interest rates rise, the value of the securities held in the fund will decline. The opposite is true when interest rates decline. Lower-rated securities in which the fund invests are subject to greater credit risk, default risk and liquidity risk. If the portfolio managers' considerations are inaccurate or misapplied, the fund's performance may suffer.

FUSI: The interest rate and corresponding payment that floating rate securities are expected to pay adjust at predetermined dates on a periodic basis. Securities with floating interest rates are generally less sensitive to interest rate changes than securities with fixed interest rates, but they may decline in value if their interest rates do not rise as much, or as quickly, as comparable market interest rates. In addition, floating rate securities held by the fund may be less liquid or more difficult to sell than other securities. If it becomes necessary for the fund to sell less liquid securities, it could have an adverse effect on the fund, especially during periods of market turbulence or unusually low trading activity.

The value of the securities that the fund principally invests in may be secured or backed by other underlying assets or obligations. As such, the value of these securities may be affected by the market value of the underlying assets, changes in the distributions on the underlying assets, defaults and recoveries on the underlying assets, capital gains and losses on the underlying assets, prepayments on underlying assets and the availability, prices and interest rate of underlying assets. In addition, these securities may be subject to number of additional risks, including interest rate, market, credit and correlation risk. Use of certain types of these securities can create economic leverage in the fund's portfolio, which may result in significant volatility and cause the fund to participate in losses in an amount that exceeds the fund's initial investment. Also, the value of these securities may decrease based on the inability or perceived inability of a security's issuer or obligated party to make interest and principal payments.

AEMB and MUSI: International investing involves special risks, such as political instability and currency fluctuations. Investing in emerging markets may accentuate these risks.

AHYB, AEMB, FUSI, MUSI and SDSI: The lower rated securities in which the fund invests are subject to greater credit risk, default risk and liquidity risk.

TAXF: Investment income may be subject to certain state and local taxes and, depending on your tax status, the federal alternative minimum tax (AMT). Capital gains are not exempt from state and federal income tax. Lower-rated securities in which the fund invests are subject to greater credit risk, default risk and liquidity risk.

FUSI, MUSI and SDSI: Derivatives may be more sensitive to changes in market conditions and may amplify risks.

SDSI: Duration, which is an indication of the relative sensitivity of a security's market value to changes in interest rates, is based upon the aggregate of the present value of all principal and interest payments to be received, discounted at the current market rate of interest and expressed in years. The longer the weighted average duration of the fund's portfolio, the more sensitive its market value is to interest rate fluctuations. Duration is different from maturity in that it attempts to measure the interest rate sensitivity of a security, as opposed to its expected final maturity.
