**Data presented reflects past performance. Past performance is no guarantee of future results. Current performance may be higher or lower than the performance shown. Investment return and share value will fluctuate, and redemption value may be more or less than original cost. Data assumes reinvestment of dividends and capital gains. Returns for periods less than one year are not annualized.**

*DUE TO MARKET VOLATILITY, CURRENT PERFORMANCE MAY BE DIFFERENT THAN THE FIGURES SHOWN.*

Focused Global Growth SMA net of fee shown is equal to the highest anticipated wrap fee charged by a program sponsor (3.00% annually which is inclusive of up to a maximum investment advisory fee of 0.75%). This total wrap fee includes all charges for trading costs, portfolio management, custody and other administrative fees. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size.

Prior to 10/1/2019, the composite's gross performance is that of the Firm's Global Concentrated Growth Equity composite. Net performance prior to 10/1/2019 was derived by taking the gross return for each account within the Global Concentrated Growth Equity composite and applying the 3% wrap fee.

## Investment Philosophy

We believe that accelerating, sustainable growth in revenues and earnings, driven by an inflection in business fundamentals, results in stock price outperformance.

- We focus on inflection points in companies' fundamentals because we believe markets are inefficient at identifying these changes.
- Our process is designed to uncover stocks that outperform as earnings growth accelerates, market expectations rise and multiples expand.

— Actual company fundamentals  
— Wall Street consensus expectations

**A Note About Risk**

The value and/or returns of a portfolio will fluctuate with market and economic conditions. Different investment styles tend to shift in and out of favor depending upon market and economic conditions, as well as investor sentiment. A portfolio may outperform or underperform other portfolios that employ a different investment style, and the stocks selected by the portfolio manager may not increase in value as predicted. Because this portfolio may, at times, concentrate its investments in a specific area, during such times it may be subject to greater risks and market fluctuations than when the portfolio represents a broader range of securities. Non-U.S. investing involves special risk considerations, including economic and political conditions, inflation rates and currency fluctuations. There is no guarantee that the investment objectives will be met. Dividends and yields represent past performance and there is no guarantee that they will continue to be paid. The MSCI AC (All Country) World Index is a free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed and emerging markets. Benchmarks cited are not investment products available for purchase.

**Key Terms: Weighted Average Market Capitalization:** The average of the weighted capitalizations of a portfolio's holdings. **Price/Earnings Ratio (P/E):** The price of stock divided by its annual earnings per share. **Price/Book Ratio (P/B):** The ratio of a stock's price to its book value per share. **Price/Cash Flow Ratio:** The ratio of a stock's price to its cash flow per share. **Standard Deviation:** Defines how widely returns varied from an average over a given period of time. A higher standard deviation means a more volatile portfolio. For example, a portfolio with a standard deviation of 6 and an average annual return of 10% saw annualized monthly returns fall within 6 percentage points of that average (or between 4% and 16%) two-thirds of the time. **Dispersion:** A measure of the amount of uncertainty and risk associated with a portfolio.
