

American Century® LOW VOLATILITY ETF

An actively managed low volatility ETF that seeks to deliver long-term market returns while realizing less volatility, particularly in downturns.

GOAL & STRATEGY:

Seeks capital appreciation.

APPROACH:

Seeks to achieve the long-term growth of equities while minimizing the variability of its returns by:

- Emphasizes strong fundamentals to limit potential risk of speculative companies with questionable profits.
- Expands risk measures beyond volatility to capture other downside and balance sheet risks.
- Focuses on volatility at the portfolio level as well as the individual stock level.
- Rebalancing strategy that actively responds to changing market conditions.

PERFORMANCE (%)	1 Mo.	QTD	1 Year	3 Year	5 Year	10 Year	Since Inception
NAV	1.47	7.42	20.07	9.13	-	-	9.73
Market Price	1.49	7.36	20.06	9.11	-	-	9.71
S&P 500	3.22	10.56	29.88	11.49	-	-	12.32

Performance data quoted represents past performance and is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Returns less than one year are not annualized. NAV prices are used to calculate market price performance prior to the date when the Fund first traded on the New York Stock Exchange. Market performance is determined using the bid/ask midpoint at 4:00 p.m. Eastern time, when the NAV is typically calculated. Market performance does not represent the returns you would receive if you traded shares at other times. To obtain performance data current to the most recent month end, please visit <https://ipro.americancentury.com/etf-performance>. Index performance does not represent the fund's performance. It is not possible to invest directly in an index.

A Note About Risk: Investment return and principal value of security investments will fluctuate. The value at the time of redemption may be more or less than the original cost. Past performance is no guarantee of future results. LVOL is an actively managed ETF that does not seek to replicate the performance of a specified index. To determine whether to buy or sell a security, the portfolio managers consider, among other things, various fund requirements and standards, along with economic conditions, alternative investments, interest rates and various credit metrics. If the portfolio manager considerations are inaccurate or misapplied, the fund's performance may suffer. There is no assurance that the fund will be less volatile than the market over the long term or for any specified period. The fund's strategy of constructing a portfolio that realizes lower volatility than the market may not produce the intended result. A security's volatility can change very quickly, and specific securities in the fund's portfolio may become more volatile than expected. Additionally, low volatility investments may underperform the equity markets during periods of strong, rising or speculative equity markets.

Morningstar Rating - LVOL

Morningstar Category - Large Blend

	Overall	3 Year	5 Year	10 Year
Rating	***	***	-	-
# of Funds	1,293	1,293	-	-

The Morningstar Rating™ for funds, or star rating, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10- year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

©2024 Morningstar, Inc. All Rights Reserved. Certain information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

DUE TO MARKET VOLATILITY, CURRENT PERFORMANCE MAY BE DIFFERENT THAN THE FIGURES SHOWN.

Exchange Traded Funds (ETF) are bought and sold through an exchange trading at market price (not NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns.

You should consider the fund's investment objectives, risks, and charges and expenses carefully before you invest. The fund's prospectus or summary prospectus, which can be obtained at [americancentury.com](#), contains this and other information about the fund, and should be read carefully before investing.

In no event shall S&P be liable for any direct, indirect, special or consequential damages in connection with recipients' use of such data or information. The S&P 500® Index is composed of 500 selected common stocks, most of which are listed on the New York Stock Exchange. Stocks are chosen on a market capitalization-weighted basis. Because of this weighting, the fund expects that the 50 largest companies will comprise a large proportion of the S&P® Index. Created by Standard & Poor's® Corporation, it is considered to represent the performance of the stock market in general. It is not an investment product available for purchase.

KEY CHARACTERISTICS

	LVOL	Benchmark
Wtd Avg Market Cap	\$528.3B	\$803.9B
Price/Earnings Ratio	25.67x	26.13x
Price/Book Ratio	5.56x	4.54x
Return on Equity	33.31%	35.79%
30 Day SEC Yield	1.26%	-
Number of Holdings	68	503

KEY TERMS:

Weighted Average Market Cap: The average of the weighted capitalizations of all holdings in a portfolio. **Price to Earnings Ratio:** The price of stock divided by its annual earnings per share. **Price to Book Ratio:** The ratio of a stock's price to its book value per share. **Return on Equity (ROE):** ROE is net income divided by shareholder's equity and is a measure of a corporate management team's ability to generate profits with the capital at its disposal. **30 Day SEC Yield:** Represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price at the end of the 30-day period. The SEC Yield should be regarded as an estimate of the fund's rate of investment income, and it may not equal the fund's actual income distribution rate, the income paid to a shareholder's account, or the income reported in the fund's financial statements. **Alpha:** Shows how a fund did relative to what would have been expected given the fund's beta and the performance of the benchmark index. **Beta:** Measures the volatility of the fund, as compared to that of the overall market. The market's beta is set at 1.00; a beta higher than 1.00 is considered to be more volatile than the market, while a beta lower than 1.00 is considered to be less volatile. **R2 - (R-squared):** A statistic that indicates how much of a fund's fluctuations were attributable to movements in the fund's benchmark index. **Sharpe Ratio:** Measures the potential reward offered by a mutual fund relative to its risk level using the fund's standard deviation and its excess return to determine reward per unit of risk. The higher the sharpe ratio, the better the fund's historical risk-adjusted performance. **Standard Deviation:** Defines how widely returns varied from an average over a given period of time. A higher standard deviation means a more volatile fund.
