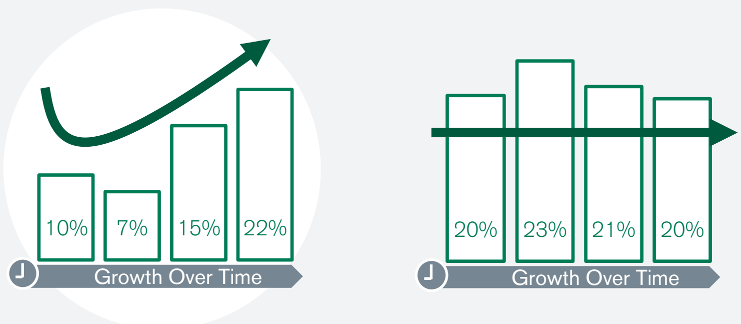
Investing With a Well-Defined Bottom-Up Growth Philosophy

We believe that accelerating, sustainable growth in revenues and earnings, driven by an inflection in business fundamentals, results in stock price outperformance.

- We focus on inflection points in companies' fundamentals because we believe markets are inefficient at identifying such points.
- Our process is designed to uncover stocks that outperform as earnings growth accelerates, market expectations rise and multiples expand.

We believe the direction of earnings growth is a more powerful predictor of stock price performance than the absolute level of growth.



Investment Process

INVESTMENT UNIVERSE
Market capitalization >$3B
Sufficient trading liquidity

Risk management does not imply low risk. The total return target is aspirational in nature and is not based on any criteria or assumptions. The target is not meant to reflect any projection or promise of performance. No guarantee or representation is being made that any account will or is likely to achieve the objectives or targets shown.

Goal

Seeks to outperform the MSCI World Index by 2% to 3% annualized over a market cycle.

Risk Guidelines

Maximum position size: 2.5% active weight

Regional exposure: +/- 10% of benchmark weight

Sector exposure: +/- 5% of benchmark weight

Emerging markets exposure: <10%

Expected tracking error: 2% to 6% versus benchmark

Quarterly Commentary

Portfolio Review

Global stocks were mixed. In the second quarter, U.S. and emerging markets stocks advanced, while non-U.S. developed markets stocks declined. First-quarter U.S. economic growth slowed to the lowest point since early 2022, and inflation moderated slightly, feeding investors' hopes for Fed interest rate cuts. Meanwhile, the European Central Bank cut rates for the first time in five years.

U.S. rate-cut expectations grew. Though the Fed kept interest rates steady during the quarter, policymakers suggested they may cut rates once by year-end. Weakening employment data heightened the expectations, with the unemployment rate reaching 4% in May and the number of U.S. job openings declining in April. Toward period-end, the futures market priced in a 63% probability of a 25 bps Fed rate cut in September.

Real estate detracted from relative results. Security selection and an overweight relative to the benchmark in real estate had a negative impact on performance, with real estate data provider CoStar Group and Prologis, a logistics-based REIT and warehouse giant, underperforming.

Information technology underperformed. Selection and an underweight in information technology pressured returns. A lack of investment in select benchmark holdings, namely Apple, and a position in software provider Workday weighed on performance.

Health care contributed. Selections in the health care sector, primarily positions in drugmakers Novo Nordisk and AstraZeneca, contributed to relative performance. A position in Boston Scientific, a medical device company, also added value.

Key Contributors

NVIDIA. Shares of the chipmaker rose amid continued investor enthusiasm for the company's artificial intelligence products, resulting in NVIDIA becoming the world's most valuable company, surpassing Microsoft and Apple. NVIDIA's 10-for-1 stock split also took place in June.

Taiwan Semiconductor Manufacturing Co. The chip contract manufacturer's latest financials included earnings and revenues that beat estimates. Meanwhile, demand for TSMC's services remains high, leading to negotiation and capacity expansion opportunities.

Novo Nordisk. Shares of the drugmaker moved higher on the continued popularity of its diabetes treatment Ozempic and weight-loss drug Wegovy. Adding to the demand, some U.S. health insurers are expected to cover Wegovy for select Medicare patients, while Wegovy has been approved for distribution in China.

Key Detractors

Apple. A lack of investment in Apple weighed on relative performance. Shares of Apple recently rose on news of an analyst's upgrade, which highlighted the company's privacy focus for its artificial intelligence platform. A staggered rollout of AI features is also expected to prolong the sales cycle of its current iPhone.

Workday. Investor sentiment dimmed on this software provider after the company released somewhat pessimistic guidance for 2024 growth in subscription revenue. However, Workday's first-quarter sales and earnings figures topped analysts' estimates.

Airbus. The aircraft manufacturer lowered profit guidance for 2024, citing supply chain challenges that have impacted its production and delivery cycles. Shares of Airbus moved lower on the news.

Notable Trades

Stryker. We expect organic growth to improve, given a combination of a recovery in surgical procedure volumes and successful new product launches. The company continues to be a leader in the U.S. orthopedic market, offering differentiated products and services.

AbbVie. We believe earnings will inflect positively, driven by an attractive product pipeline and the declining impact of patent expirations on a major product (Humira). We expect the company to offset the headwind from Humira with growth from newer assets such as Skyrizi, Rinvoq and Vraylar.

Stellantis. We exited our position after the automaker reported disappointing results and forward earnings expectations were revised lower. In the meantime, the automobile pricing environment will likely remain uncertain especially if interest rates remain high and other economic indicators worsen.

Equinix. While its core business continues to benefit from secular growth drivers, Equinix's share price performance has been disappointing given the company is organized as a REIT. We have decided to exit the position to reinvest in other opportunities.

Positioning for the Future

We believe a key benefit of our investment approach is the ability to identify businesses with a diverse set of growth drivers. We think these drivers are sustainable and complement our holdings' other idiosyncratic characteristics.

We see red flags for U.S. economy, but opportunities remain. After a long period of tight conditions, we're seeing evidence that the U.S. labor market is normalizing. Unemployment is elevated compared to a year ago, and continuing claims for unemployment benefits recently hit their highest point in more than two years. We've also observed weakness in consumer spending, with companies reporting that many high-income customers are trading down to less expensive products and that less affluent consumers are gravitating to private-label offerings. Still, we believe we are finding stronger earnings growth and inflection opportunities in the U.S. compared to Europe.

Artificial intelligence is propelling capital spending. First-quarter reporting highlighted an acceleration in the AI arms race. Demand for cloud computing services continued to climb, as reflected in higher-than-expected capital expenditures by notables Meta Platforms, Alphabet and Microsoft. The AI build-out requires technology upgrades for handling massive amounts of data at high speeds. This is spurring earnings growth in companies that make components for processing data and cooling the equipment inside data centers, as well as businesses that generate and distribute the electricity that powers them.

Stock-specific growth drivers remain in focus. We believe businesses with the ability to grow and deliver earnings that are not dependent on the economic cycle will be rewarded in a higher-for-longer interest rate environment. In addition to artificial intelligence-related businesses, examples include companies with strong positions in the market for weight-loss drugs and aircraft parts makers that benefit from the lengthy backlogs at The Boeing Co. and Airbus. We've also seen positive trends in the semiconductor market, including chipmakers that are not leveraged to the AI infrastructure build-out.

Earnings growth could be poised to broaden. We could see a wider range of companies posting strong earnings growth in the second half of 2024. Many technology-related businesses have tough year-over-year profit growth comparisons to beat, while sectors that struggled in 2023 have relatively easier hurdles to clear. As a result, we may see the Magnificent Seven come back to the pack. According to earnings growth forecasts, the rest of the S&P 500 Index will overtake the Magnificent Seven in the fourth quarter. In turn, we believe market performance could become more widely distributed as a broader range of companies delivers stronger profit growth.

The real estate slump remains a headwind for China. The real estate market is the key sentiment driver for industrial and consumer demand in China. Despite recent policy changes, China's housing market continues to face downward price pressures from excess supply and is creating headwinds for China-based businesses and companies selling into the country.
