

# Short Duration Inflation Protection Bond

## Quarterly Commentary

### Market Review

**Bonds declined modestly.** U.S. investment-grade bonds retreated during the quarter but maintained a year-to-date gain. Investor optimism improved as banking industry turmoil subsided and Congress averted a debt ceiling crisis. While all key investment-grade sectors declined for the three-month period, credit-sensitive sectors fared better than rate-sensitive bonds.

**Fed hiked then paused.** After implementing its 10th-consecutive rate hike in May, the Federal Reserve (Fed) took a break in June, holding rates at a range of 5% to 5.25%. However, with inflation still well-above target and the job market still robust, policymakers admitted the pause was likely temporary and more tightening could be necessary. Accordingly, expectations for Fed rate cuts later this year faded.

**U.S. economy beat forecasts.** Data released in the period showed the economy grew at a 2% annualized pace in the first quarter, beating forecasts. Indicators were mixed in the second quarter. Manufacturing contracted and sank to a six-month low, while the services sector grew. The unemployment rate ended June slightly higher than it was in March, but consumer confidence rose to a four-month high.

**Treasury yields resumed their upward march.** After dropping in the first quarter, Treasury yields reversed course amid better-than-expected economic data and a still-hawkish Fed. Overall, the 10-year Treasury yield climbed 0.37% to 3.84%, and the two-year yield jumped 0.87% to 4.9%. The yield curve remained inverted.

**Riskier assets outperformed.** In the risk-on quarter, credit spreads tightened, and credit-sensitive securities, including corporate and securitized bonds, outperformed Treasuries. With yields rising, Treasuries were among the market's weakest performers. Meanwhile, high-yield corporates delivered gains for the quarter and outperformed investment-grade corporates.

**Inflation's pace slowed.** The annual rates of headline and core Consumer Price Index (CPI) moderated to 4% and 5.3%, respectively, in May (reported in June), still well above Fed targets. Declining energy prices largely accounted for the easing in headline CPI. An 8% increase in shelter costs accounted for most of core CPI's gain. Longer-term inflation expectations declined, and Treasury inflation-protected securities underperformed nominal Treasuries.

### Portfolio Performance Review

**Yield curve, duration positioning detracted.** Our yield curve positioning, which reflected a flattening bias, detracted from results as short maturity yields soared and the curve inverted further. We also maintained a longer-than-index duration, given our view that recession risk is rising. This positioning detracted as Treasury yields rose for the quarter.

**Inflation position boosted performance.** Our exposure to inflation-linked securities was neutral versus the index and aided relative results. We favored the shorter-maturity inflation-protected securities in the portfolio's maturity range, which lifted performance. We also held inflation swaps in conjunction with out-of-index securitized and corporate bonds.

**Securitized bonds aided results.** Our out-of-index position in securitized securities boosted relative performance, led by asset-backed securities, commercial mortgage-backed securities and collateralized loan obligations. Additionally, our out-of-index stake in investment-grade corporate bonds slightly lifted relative results.

### Goal and Strategy

Real return, primarily through investment-grade, short-term inflation-indexed bonds.

# Short Duration Inflation Protection Bond Fund

## Portfolio Positioning

**Recession elusive but still likely.** We expect the combination of elevated inflation, restrictive monetary policy and tighter lending conditions to eventually trigger a recession. The timing and depth of the downturn remain uncertain, though, largely due to the labor market, which has been surprisingly resilient. In our estimate, recession may emerge in late 2023 or early 2024.

**Fed close to ending rate-hike campaign.** While inflation has moderated from last year's multiyear highs, it remains above the Fed's comfort zone. It takes time for the full effects of Fed rate increases to flow through the economy, and we believe an economic pullback is imminent. We expect additional tightening in the third quarter before the Fed definitively concludes its rate-hike campaign.

**Inflation slowing.** We expect headline inflation will ease further. However, inflation may now be embedded in wages, causing services prices to remain elevated. Fed hawkishness and a likely recession are pressuring inflation break-even valuations. Accordingly, we continue to favor shorter-maturity inflation-linked securities, as we await better reentry points in longer maturities.

**Rates nearing a peak.** After rising in the second quarter, Treasury yields are near pre-banking-crisis levels of early 2023 and likely close to peaking. As growth fades, we expect yields to move lower, underscoring our confidence in a duration overweight relative to the benchmark. Additionally, demand for higher-quality bonds should rise as recession nears, further highlighting this strategy's potential benefits.

**Higher-quality bias remains intact.** Overall, we still favor higher-quality, less-volatile securities as we navigate economic and market uncertainties. Among corporates, we continue to focus on higher-rated bonds and more-defensive sectors. Similarly, in the securitized sector, we are maintaining an up-in-quality bias across credit-sensitive segments.

**Securitized sector offers value.** Our ongoing relative value analysis continues to highlight the securitized sector. We are finding value among shorter maturity securities in senior tranches, which have benefited from the yield and spread backdrops. Meanwhile, we took advantage of attractive valuations and lower volatility among agency mortgage-backed securities to book profits and slightly reduce exposure.

Historical performance for the I Class prior to its inception is based on the performance of R5 Class shares. I Class performance has been adjusted to reflect differences in expenses between classes, if applicable.

Expense ratio is as of the fund's current prospectus. The I Class minimum investment amount is \$5 million (\$3 million for endowments and foundations) per fund. The R5 Share Class is available only to participants in group employer-sponsored retirement plans where a financial intermediary provides recordkeeping services to plan participants.

Returns or yields for the fund would have been lower if a portion of the management fee had not been waived. Review the annual or semiannual report for the most current information.

Periods greater than one year have been annualized.

Investments in fixed income securities are subject to the risks associated with the debt securities including credit, price and interest rate risk.

In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, inflation-protected securities with similar durations may experience greater losses than other fixed income securities. Interest payments on inflation-protected debt securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable.

There is no guarantee that the investment objectives will be met.

Generally, as interest rates rise, the value of the securities held in the fund will decline. The opposite is true when interest rates decline.

Source: Bloomberg Index Services Ltd. Bloomberg U.S. 1-5 Year Treasury Inflation Protected Securities (TIPS) Index consists of inflation protected securities issued by the U.S. Treasury with maturities between one and five years.

**Adjustable-Rate Mortgages (ARMs):** Mortgages in which the interest rate is adjusted periodically according to a specific index.

**Agency Securities (Agencies):** Debt securities issued by U.S. government agencies.

**Agency MBS:** Mortgage-backed securities issued by U.S. government agencies.

**Alternative Minimum Tax (AMT):** A parallel tax system that was created to keep high income individuals from avoiding taxes through various deductions and exemptions.

**Asset-Backed Securities (ABS):** A form of securitized debt backed by loan assets such as auto loans, student loans, and credit card debt.

**Basis Points:** Used to express percentage values that are carried out to two decimal places. One basis point equals 0.01%.

**Breakeven Rate:** Yield difference between nominal Treasury notes and TIPS; indicates the market's expectations for inflation.

**Carry-Oriented Currencies:** Higher-yielding currencies of countries where interest rates are generally higher than those of countries with lower-yielding currencies. These higher-yielding currencies are targeted for "carry trades," where investors borrow money in a low-interest rate currency and invest in a higher yielding currency, potentially profiting from the difference in interest rates.

**Collateralized Loan Obligations (CLOs):** A form of securitized debt, typically backed by pools of corporate loans and their payments.

**Collateralized Mortgage Obligations (CMOs):** A form of structured, securitized debt derived from mortgage-backed securities, typically backed by pools of residential mortgages and their payments.

**Commercial Mortgage-Backed Securities (CMBS):** Securities representing ownership in pools of commercial real estate loans used to finance the construction and improvement of income-producing properties such as hotels, shopping centers, and office buildings.

**Commercial Paper:** Short-term debt issued by corporations to raise cash and to cover current expenses in anticipation of future revenues.

**Commodity:** Basic raw materials such as precious metals and natural resources.

**Consumer Price Index (CPI):** Published by the U.S. government, CPI is the most commonly used statistic to measure inflation in the U.S. economy.

**Contribution to Duration (CTD):** A measure of bond portfolio risk that reflects a bond sector's contribution to the overall duration of the portfolio.

**Corporate Debt:** Debt instruments issued by private corporations.

**Covered Bonds:** Debt securities backed by cash flows from pools of mortgages or public sector loans. The asset pools help secure or "cover" these bonds if the originating financial institution becomes insolvent.

**Coupon Interest Rate:** The interest rate that is assigned to an interest-paying fixed income security when it is issued.

**Credit Analysis:** An analysis of the financial strength of the issuer of a security, and the ability of that issuer to provide timely payment of interest and principal.

**Credit Default Swap:** Credit derivative contracts between two counterparties that can be used to hedge credit risk or speculate on the changes in the credit quality of a corporation or government entity.

**Credit Quality:** Measures (usually in terms of high or low) the ability of issuers of debt securities to make timely interest and principal payments.

**Credit Risk:** The risk that the inability of the issuers of debt securities to make payments will cause these securities to decline in value.

**Currency Overlay:** A financial trading strategy used to separate the management of currency risk from other portfolio strategies. A currency overlay manager can seek to hedge the risk from adverse movements in exchange rates, and/or attempt to profit from tactical currency views.

**Debt Service:** The amount of money required within a given period to keep current on required/scheduled repayments of outstanding debt, including interest and principal.

**Deflation:** A decline in prices for goods, assets and services.

**Derivatives:** Securities whose performance and/or structure is derived from the performance and/or structure of other assets, interest rates or indexes.

**Duration:** A measure of the price sensitivity of a fixed income investment to changes in interest rates. The longer the duration, expressed in years, the more a fixed income investment's price will change when interest rates change.

**Emerging Markets (EM) Debt:** Debt issued by countries whose economies are considered to be developing or emerging from underdevelopment.

**Excess Return:** The return of an investment portfolio minus the return of what is considered to be a relatively risk-free asset, such as a U.S. Treasury bill.

**Exchange-Traded Fund (ETF):** Represents a group of securities but is traded on an exchange like an individual stock.

**Federal Funds Rate:** An overnight interest rate banks charge each other for loans.

**Federal Open Market Committee (FOMC):** The committee that sets interest rate and credit policies for the Federal Reserve System, the U.S. central bank.

**Federal Reserve (Fed):** The U.S. central bank, responsible for monetary policies affecting the U.S. financial system and the economy.

**Fundamental Factors:** Economic or financial data used in determining asset value.

**Futures Contracts (Futures):** Agreements to buy or sell a specific amount of a commodity or financial instrument at a particular price on a stipulated future date.

**General Obligation (GO) Bonds:** Municipal bonds that are secured by the full faith and credit of the issuer, including its taxing power.

**Gross Domestic Product (GDP):** A measure of the total economic output in goods and services for an economy.

**Government-Sponsored Enterprises (GSEs):** Privately owned corporations created by Congress to provide funding and help to reduce the cost of capital for certain borrowing sectors of the economy such as homeowners, students and farmers.

**Headline Risk:** Refers to the risk that a negative news media headline about one security issuer, incident or sector could affect the demand for and pricing of a much wider swath of securities.

**Hedge:** An investment designed to reduce the risk of an adverse price move in another investment. Often a hedge consists of taking an offsetting position in a related investment, such as a futures contract.

**High-Yield (HY) Debt:** Fixed income securities with lower credit quality and lower credit ratings. High-yield securities are rated below BBB-.

**Hybrid Adjustable-Rate Mortgages (ARMs):** Combine the characteristics of fixed-rate and adjustable-rate mortgages, with rates remaining fixed for a set period of time and then adjusting periodically according to a specific index.

**Inflation:** An economic condition of rising prices for goods, services and assets, or equivalently, a declining value of money. Core inflation excludes food and energy prices, which tend to be volatile. It is the opposite of Deflation.

**Inflation-Indexed Securities:** Debt securities that offer returns adjusted for inflation. Typically, the principal of inflation-indexed securities is indexed to a widely used inflation measure and adjusted accordingly. Interest payments can be adjusted as well.

**Interest Rate Risk:** The risk that a fixed income investment's value will change due to changes in interest rates.

**Investment-Grade (IG) Debt:** Fixed income securities with relatively high credit quality and credit ratings in the upper ranges of those provided by credit rating services. Using Standard & Poor's ratings as the benchmark, investment-grade securities are those rated BBB- or higher.

**Leverage:** The use of financial instruments and/or borrowed capital to increase potential returns or to increase purchasing power.

**Long Position:** Typical ownership of an asset or investment that gives the owner the right to transfer ownership, the right to any income generated by the asset, and the right to any profits or losses due to value changes.

**Long/Short Position:** A "market neutral" investing strategy that involves taking long positions in assets that are expected to increase in value and short positions in assets that are expected to decrease in value.

**Master Limited Partnerships (MLPs):** Publicly traded, generally higher-yielding securities of enterprises that engage in certain businesses, usually pertaining to the use of natural resources.

**MSCI ACWI (All Country World Index):** A free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed and emerging markets.

**Municipal Securities:** Debt securities typically issued by or on behalf of U.S. state and local governments, their agencies or authorities to raise money for a variety of public purposes, including financing for state and local governments as well as financing for specific projects and public facilities.

**Nominal Yield:** The interest rate to par value that the bond issuer promises to pay bond purchasers.

**Non-Agency Mortgage-Backed Securities (MBS):** MBS are groups of home mortgages that are sold by the issuing banks and then packaged together into "pools" and sold as a single security. Non-agency MBS are issued by private entities, such as financial institutions.

**Mortgage-Backed Securities (MBS):** A form of securitized debt that represents ownership in pools of mortgage loans and their payments.

**Personal Consumption Expenditures (PCE):** This price deflator which comes from the Bureau of Economic Analysis' quarterly report on U.S. gross domestic product is based on a survey of businesses and is intended to capture the price changes in all final goods, no matter the purchaser. Because of its broader scope and certain differences in the methodology used to calculate the PCE price index, the Federal Reserve holds the PCE deflator as its preferred, consistent measure of inflation over time.

**Quantitative Easing (QE):** A form of monetary policy used by central banks to stimulate economic growth by purchasing domestic government securities to increase the domestic money supply, lower interest rates and encourage investors to make investments in riskier assets such as stocks and high-yield securities.

**Real Estate Investment Trusts (REITs):** Securities that trade like stocks and invest in real estate through properties or mortgages.

**Real Yield:** A yield that has been adjusted to remove the effects of inflation.

**Revenue Bonds:** Municipal bonds that are secured by the net revenues from the project or facility being financed.

**S&P 500 Index:** The S&P 500® Index is composed of 500 selected common stocks most of which are listed on the New York Stock Exchange. It is not an investment product available for purchase.

**Secondary Market:** A market where investors make purchases from other investors, rather than from the initial issuers.

**Securitized Debt:** Debt resulting from aggregating debt instruments into a pool of similar debts, then issuing new securities backed by the pool. ABS, MBS, and CMOs are common forms of securitized debt.

**Short Position:** Refers to the sale of an asset borrowed, not owned, by the seller in anticipation of a price decline. If the seller can buy the asset later (to return what was borrowed) at a lower price, a profit results. If the price rises, the borrower/seller suffers a loss.

**Sovereign Debt:** A country's government-issued debt, priced in its native currency, which can be sold to investors in other countries.

**Spreads, Maturity Spreads, Credit Spreads:** Measured differences between two interest rates or yields that are being compared with each other. Spreads typically are measured between fixed income securities of the same credit quality, but different maturities (maturity spreads), or of the same maturity, but different credit quality (credit spreads).

**Spread Sectors:** Non-Treasury debt sectors with securities that usually trade at higher yields than comparable-maturity U.S. Treasury securities. These sectors typically trade at higher yields than Treasuries because they usually have relatively higher credit risk and/or more risk of prepayment.

**Spread Widening, Tightening:** Changes in spreads that reflect changes in relative value, with spread widening usually indicating relative price depreciation and spread tightening indicating relative price appreciation.

**Swaps:** Two-party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year. In a standard "swap" transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments.

**Treasury Inflation-Protected Securities (TIPS):** Inflation-linked debt securities issued by the U.S. Treasury.

**Technical Factors:** Market price behavior, trends, volume, and momentum data used in determining asset value.

**Variable-Rate Demand Notes (VRDNs):** Short-term debt securities that track market interest rates using periodic (daily, weekly, monthly, or quarterly) interest rate adjustments.

**Weighted Average Life to Maturity:** The average time in years to receive the principal repayments.

**Yield:** A rate of return for bonds and other fixed-income securities. There are several types of yields and yield calculations.

**Yield Curve:** A line graph showing the yields of fixed income securities from a single sector from a range of different maturities at a single point in time.

**Yield to Maturity:** A common performance calculation for fixed income securities, which takes into account total annual interest payments, the purchase price, the redemption value, and the amount of time remaining until maturity.

**Real Yield to Maturity:** Yield to maturity minus any "inflation premium" that had been added/priced in.

**Zero-Coupon Securities:** Debt securities that are sold at a deep discount then redeemed for their full face value at maturity.
