

QUARTERLY COMMENTARY

American Century®

U.S. QUALITY VALUE ETF

Designed to offer core value exposure that dampens the cyclicity of value investing to pursue enhanced risk-adjusted returns versus market-cap weighted indexing.

Adjustments to Value and Income allocations seek to take advantage of prevailing market conditions. Allocation changes are based on analysis of risk-adjusted returns rather than pure price momentum, which helps the portfolio respond—but not overreact—to changing markets. The result is a core value holding designed to stand up to market changes and pursue more consistent returns across the market cycle.

Strategy Highlights

Emphasis on what we believe is quality core value. VALQ seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the iSTOXX ACI USA Quality Value Index (the underlying index). The underlying index is designed to reflect what we think of as high-quality securities of large- and mid-cap companies that could be central investments in a portfolio and are attractively valued or can provide steady income based on our research.

We seek to dampen the impact of cyclicity. VALQ is designed to offer core value exposure to investors with the potential to dampen the impact of the economic cycle on value investments, which are often influenced by fluctuations in the economy. The strategy seeks to provide better risk-adjusted returns than market-cap-weighted value benchmarks by dynamically allocating to what we believe are high-quality, attractively valued companies and companies that can offer sustainable income based on our research.

Managed exposure to risk. The team seeks to mitigate exposure to risk by imposing position limits, emphasizing what we have identified as large-cap and less volatile securities and overweighting companies relative to the benchmark that we think can continue to generate income for investors when value investing falls out of favor.

Portfolio Review

Stocks posted gains. U.S. stocks ended the period higher. For the first half of the year, performance was largely driven by the stocks of companies currently benefiting from artificial intelligence (AI) and those expected to benefit as AI is incorporated into their businesses.

Large-cap stocks led performance. Stock gains were due to the outperformance of large-cap stocks, especially select large-cap growth stocks that benefited from optimism about AI. Value stocks declined across the market-capitalization spectrum, as did mid- and small-cap growth stocks.

Industrials detracted from relative results. The machinery industry hampered performance, contributing to underperformance in the sector. Positioning in the aerospace and defense industry also hurt performance.

Financials weighed on performance. Stock selection in the sector was negative. Positioning among banks was detrimental, and the capital markets industry also detracted due to stock selection.

Information technology benefited performance. Stock selection and an overweight allocation relative to the benchmark aided results. The computers and peripherals industry led outperformance, helped by the strong performance of Apple. Stock selection in the semiconductors and semiconductor equipment industry was also positive.

Dynamic allocation. The strategy began the quarter with a 65% income/35% value allocation, shifted to a neutral allocation of 50% value/50% income in May and ended the quarter with an allocation of 65% value/35% income.

GOAL & STRATEGY:

Tracks the American Century U.S. Quality Value Index.

Key Terms:

ETF Market Price: The price at which shares in the ETF can be bought or sold on the exchanges during trading hours.

Performance data quoted represents past performance and is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Returns less than one year are not annualized. NAV prices are used to calculate market price performance prior to the date when the Fund first traded on the New York Stock Exchange. Market performance is determined using the bid/ask midpoint at 4:00 p.m. Eastern time, when the NAV is typically calculated. Market performance does not represent the returns you would receive if you traded shares at other times. To obtain performance data current to the most recent month end, please visit <https://ipro.americancentury.com/etf-performance>. Index performance does not represent the fund's performance. It is not possible to invest directly in an index.

On May 31, 2023, VALQ began to track the American Century® U.S. Quality Value Index. Historical index data prior to May 31, 2023, is for the iSTOXX® American Century® USA Quality Value Index. Spliced index data on and after May 31, 2023, is for the Spliced U.S. Quality Value Index.

A Note About Risk:

Investment return and principal value of security investments will fluctuate. The value at the time of redemption may be more or less than the original cost. Past performance is no guarantee of future results.

VALQ is not actively managed and the portfolio managers do not attempt to take defensive positions under any market conditions, including declining markets. The portfolio managers also do not generally add or remove a security from the fund until such security is similarly added or removed from the underlying index. Therefore, the fund may hold an underperforming security or not hold an outperforming security until the underlying index reacts. This may result in underperformance compared to the market generally.

In addition, there is no assurance that the underlying index will be determined, composed or calculated accurately. While the index provider provides descriptions of what the underlying index is designed to achieve, the index provider does not guarantee the quality, accuracy or completeness of data in respect of its indices, and does not guarantee that the underlying index will be in line with the described index methodology. Gains, losses or costs to the fund caused by errors in the underlying index may therefore be borne by the fund and its shareholders.

DUE TO MARKET VOLATILITY, CURRENT PERFORMANCE MAY BE DIFFERENT THAN THE FIGURES SHOWN.

Exchange Traded Funds (ETF) are bought and sold through exchange trading at market price (not NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns.

You should consider the fund's investment objectives, risks, and charges and expenses carefully before you invest. The fund's prospectus or summary prospectus, which can be obtained at americancentury.com, contains this and other information about the fund, and should be read carefully before investing.

The American Century® U.S. Quality Value Index seeks to capture the performance of large- and mid-capitalization companies in the U.S. that possess attractive quality, valuation, and income fundamentals.

The iSTOXX® American Century® USA Quality Value Index (underlying index) is a systematic, rules-based proprietary index that is owned and calculated by STOXX based on the STOXX 900 Index. The underlying index aims to dynamically allocate to both quality companies with sound fundamentals and attractive valuations and companies with sustainable income. The Stoxx 900 Index covers the 900 largest U.S. companies by market capitalization. It is not possible to invest directly in an index.

iSTOXX® American Century® USA Quality Value Index is the intellectual property (including registered trademarks) of STOXX Limited, Zurich, Switzerland ["STOXX"], Deutsche Börse Group or their licensors, which is used under license. American Century® STOXX® U.S. Quality Value ETF is neither sponsored nor promoted, distributed or in any other manner supported by STOXX, Deutsche Börse Group or their licensors, research partners or data providers and STOXX, Deutsche Börse Group and their licensors, research partners or data providers do not give any warranty, and exclude any liability (whether in negligence or otherwise) with respect thereto generally or specifically in relation to any errors, omissions or interruptions in the iSTOXX® American Century® USA Quality Value Index or its data.

The Russell 1000® Index measures the performance of the 1,000 largest companies in the Russell 3000® Index (the 3,000 largest publicly traded U.S. companies based on total market capitalization). The Russell 1000® Value Index measures the performance of those Russell 1000® companies with lower price-to-book ratios and lower forecasted growth values. Created by Frank Russell Company, indices are not investment products available for purchase.
